

## CAUTION

Thank you for purchasing **Syalon** thermocouple protection tubes from SRS Amsterdam B.V. Although these products are produced under strict ISO 9002 approved quality control, it is necessary to observe the following precautions in order to maintain your **warranty**.

- Do not use **Syalon** tubes in excess of 1200°C.
- Use in molten metal only.
- Remove the tube prior to solidification of the metal.
- Avoid contact with direct flames.
- Prevent temperature shocks of over 800° C (cold to hot).
- Prevent any temperature shocks from hot to cold (quenching)
- Preheating is necessary when temperature is higher than 800° C.
- Do not subject to mechanical abuse such as impact, compression, tensile, torque stresses or abrasion.

---

## LIMITED WARRANTY

SRS Amsterdam B.V. hereby gives a guarantee on **Syalon** protection tubes against manufacturing faults and chemical corrosion for **one year** when used in molten aluminium and **three months** when used in brass. The guarantee is valid provided that:

1. Any such defect is not caused by accident, misuse, abuse or neglect after delivery.
2. The product is used in its intended application and in compliance with the cautionary instructions given above.
3. The product has not been altered or repaired in any matter.
4. Notification of the nature of the defect is provided to SRS Amsterdam B.V. within 15 days of discovery of such defect, and that the product is returned to SRS Amsterdam B.V. for inspection.

Should the product fail during proper use within the warranted time period, SRS Amsterdam B.V. will, at its sole discretion, repair or replace the tube or refund the original purchase price on pro rata basis. Consequential damages, regardless of whether or not the product was defective, are expressly excluded from the terms of warranty.
